SUMMARY

DevOps & SRE engineer with 2+ years building **highly-available, low-latency** infrastructure for **high-traffic** platforms on AWS and GCP. Ships production **B2C products** end-to-end — from serverless app backends with live App Store users to Moovit-scale public-transit web apps. Deep in **Kubernetes**, full-cycle **CI/CD**, GitOps and IaC, with hands-on reliability engineering (monitoring, SLA, on-call). **11 certifications**, including AWS and GCP Professional.

DEVELOPMENT	Python · Bash · Flask · SQL · Flutter
AI & AUTOMATION	Claude Code · Cursor · AWS Bedrock · Gemini

EXPERIENCE

- DevOps Engineer · Compie Technologies · Ramat Gan, Israel · Hybrid

Sep 2025 — Present

 - Ministry of Transport / Maslulan (Moovit-like consumer transit web app) — delivered a highly-available, low-latency platform for a high-traffic public product, by architecting end-to-end AWS infrastructure with centralized logging, a full monitoring & alerting stack (Prometheus / Grafana) and CI/CD pipelines.
 - Bank Hapoalim (Platform team) — improved release reliability across production **EKS** clusters by building GitLab CI pipelines and automating environment provisioning with Torque (Quali).
 - Topocad (GIS SaaS on AWS) — scaled containerized **ECS** microservices by designing autoscaling infrastructure with Terraform and Bitbucket CI/CD.
 - Mapi — enabled secure access at scale by architecting a multi-account Landing Zone with a central API Gateway, shared core endpoints and STS-based cross-account S3.
- DevOps Engineer · Ness Technology · Ra'anana, Israel

Sep 2024 — Sep 2025

 - Shikun & Binui — stood up production-grade AWS infrastructure from scratch by codifying it end-to-end with Terraform and GitHub Actions CI/CD.
 - Hardened the reliability and security posture of a multi-account AWS Organization by enforcing Service Control Policies (SCP) and IAM least-privilege alongside the security team.
 - Improved incident response across environments by building centralized logging and alerting and supporting on-call operations.

PROJECTS

- Fivory — Habit & Productivity App 500+ live users · iOS + Android

fivory.net

Shipped a **B2C product** to 500+ active users as solo founder, on a fully serverless, low-latency AWS backend (Lambda · API Gateway · DynamoDB · Cognito) with IAM least-privilege and global CloudFront CDN delivery.
- Obsid Workout — Training App iOS + Android

obsid.click

Consumer fitness app with streak tracking and body-progress, delivered on a secure serverless AWS backend with global CDN delivery via CloudFront.
- FlaskPipeline — Production GitOps Pipeline

github.com/MatveyGuralskiy

End-to-end GitOps for a Flask app on AWS EKS — Jenkins CI, GitHub Actions CD, ArgoCD, Terraform IaC and a full Prometheus / Grafana observability stack.
- DribbleData — Microservices on EKS

github.com/MatveyGuralskiy

Flask microservices on AWS EKS with CI/CD, Trivy security scans, Fluent Bit logging, automated backups and CloudFront CDN.
